Skills

- **Backend:** Java 17, Spring Boot, Spring Data JPA, Spring Security, JWT, REST APIs, C#.
- **Databases & Infrastructure:** PostgreSQL, Flyway, Docker, Testcontainers, H2, GCP, Nginx, Cloudflare.
- **Software Quality & CI/CD:** JUnit, Mockito, Integration Testing, GitHub Actions (CI/CD).
- **Tools:** Git, GitHub, Jira, Scrum.
- **Languages:** Portuguese (Native), English (Professional Working Proficiency).

Backend Personal Projects

Backend Programmer

 [Order Notification Service](#)

06/2026 - 07/2026

Java 21, Spring Boot 3, Spring Data JPA, PostgreSQL 15, RabbitMQ, Flyway, Docker, Testcontainers, JUnit 5, Mockito.

REST API for order management publishing asynchronous events to RabbitMQ to generate notification records.

- Developed a REST API for order processing using RabbitMQ for asynchronous and decoupled notification processing.
- Modeled PostgreSQL databases and managed schema migrations with Flyway, ensuring data integrity.
- Developed unit and integration tests with JUnit, Mockito, and Testcontainers for PostgreSQL and RabbitMQ.

Backend Programmer

 [Purchase Verified Review API](#)

05/2026 - 06/2026

Java 17, Spring Boot 3.x, PostgreSQL 15, Flyway, JWT, Testcontainers, Docker, GitHub Actions.

Marketplace REST API developed to ensure product reviews are submitted exclusively by verified buyers.

- Designed and developed the security architecture from scratch using JWT authentication/authorization (Spring Security), securing critical endpoints against ID enumeration attacks using UUIDs.
- Modeled relational database schemas and managed versioning via Flyway, implementing Soft Delete logic to preserve historical data and maintain referential integrity for orders and transactions.
- Ensured application stability and robustness with comprehensive unit and integration testing suites using Testcontainers (ephemeral PostgreSQL via Docker), integrated into an automated CI/CD pipeline via GitHub Actions.

Backend Programmer

 [Task Manager API](#)

05/2026 - 05/2026

Java 17, Spring Boot 3, Spring Data JPA, H2 Database, Bean Validation, OpenAPI (Swagger).

REST API for task management focused on clean code structure.

- Developed independently using a layered architecture designed for separation of concerns, ensuring entry and exit payload immutability through Java Record DTOs.
- Implemented centralized exception handling (ControllerAdvice) to standardize API error responses and applied declarative data validation rules using Bean Validation.

Professional Projects

Game / Backend Programmer

 [Idle Journey](#)

04/2025 - 11/2025

Unity (C#), Go, Docker, WebSockets, GCP, Nginx, Cloudflare, Browser RPG Game

- Worked on expanding, refactoring, and scaling core systems of the production project, designing business features such as cloud-persisted inventory, card collections, and weighted probability logic.
- Integrated client-server communication using WebSockets with a Go backend for game state synchronization and data validation.
- Developed internal Unity editor tools to automate tasks for the design team, including a structured data validator and bulk configuration file export pipelines (CSV/Scriptable Objects).
- Managed technical environments and web application deployments using Docker, Nginx, Cloudflare, and GCP instances.

Education

Digital Games

[Faculdade Méliès](#)

02/2022 - 06/2025

- Technology Degree in Digital Games.

Complete English Course

[CCAA](#)

02/2009 - 12/2020

- Achieved advanced proficiency after completing the full CCAA curriculum, from basic to advanced mastery levels.

Others

- **Tape Us Out Gamescom LATAM 2025:** Game selected to be exhibited at **Gamescom LATAM 2025** (Student Panorama). (05/2025)
- **Atonia at BGS 2024:** Game exhibited at **Brasil Game Show 2024**, one of the largest gaming events in Latin America. (10/2024)
- **Speaker at Campus Party Nordeste 2024:** Technical speaker at Campus Party Nordeste 2024 ("Scope, Time, and Burnout"). (09/2024)
